

Tyler Bradley – ECES T580 Lab 5

Lab 5.1.1

The coronavirus that is most closely related to Human SARS CoV is Palm Civet.

Lab 5.2.1 – Online Portion

The origin of the SARS epidemic appears to have begun at Gaungzhou Guangdong on Dec 16, 2002 but is also closely related to another strain of the norovirus from 12/26/02 in Zhongshan Guangdong. However, the 12/16/02 strain seems to be more closely related to strains sequenced in the early months of 2003.
